

## The study of the soul: structure of the soul and bodies of the soul

Irina Zhuravleva, Ph.D<sup>1</sup>

*Yuri Zuikov - translation from Russian into English*

Who are we? This issue is of concern to all, especially now: Soul, Spirit, compacted fine matter or something more mysterious and unknown, but desired to be understood.

We are going to talk about the soul, how it is created, in which fields. Let's consider the structure of the Soul at the cellular level. Let's get acquainted with the bodies of the Soul, their functions and tasks. Let us come to her level of consciousness.

Different nations of the world use their own symbols of Soul: psyche, the astral body, the conscience, the subtle body, the spirit, the subconscious, super-conscious, the unconscious, the voice of the heart, Velis, atma, the monad, energy-informational matrix, the reactive mind, etc. The doctrine of the soul over the centuries developed as a part of philosophy, which viewed the two opposing views: whether the soul is an integral part of the physical body, or is it - a substance that can live completely independently, regardless of the physical body. Only in the 70s of 19th century psychology transformed into a science.

Along with the philosophy evolved biology and physics, which should help to unlock the mystery of the soul. And now the time has come when we come to the threshold, surpassing that we can learn all we are interested in the soul.

Eastern legends have information that the man is a spirit, dressed in a fire, and a thin dense shell. Thin section should be understood as a Life, thick - the physical body, and fire is something that will have to learn to reach a unified collective consciousness field.

Many years of personal research shows that in our dual world soul can exist apart from the physical body, but then it does not develop it in the right direction, hangs in the astral planes of Earth, and then it does not evolve, does not fulfill its task: to know itself and gain some qualities. The natural way of the Soul: get into the physical body in order to gain experience in the material world and become co-creator with God. Once the soul fulfills its purpose for being in the material world, it ascends into the spiritual kingdom.

The soul, like everything else, is created from energy, but not the one that vibrates in the physical spectrum, it has a higher initial rate of vibration. The soul is not a physical one. We consider several definitions of the term "Soul".

---

<sup>1</sup> yuraz85@gmail.com (Russia, Moscow)

"I tend to define as a reasonable soul, radiant form of energy. The soul immediately after death suddenly feels a change, because it is no longer burdened by its own temporary body to the brain and central nervous system "(Michael Newton "Soul Purpose. Exploring life after life". / Trans. From English. K.Hayrapetyan ., St. Petersburg.: The Future of the Earth, 2004.-328p.)

In modern psychology, the manifestation of Soul is referred to as the stimulating effect of the superego (ethically conscious element), which led to serious errors in the understanding of its nature and the practical and theoretical activities.

German physicist and mathematician Gottfried Wilhelm Leibniz (1646-1716) sometimes addressed to metaphysics. In his work "Monadology" Leibniz expresses the view that everything is composed of monads, which, although they are mutually independent, yet comes in advance as expected, it confirmed the correctness of the research of other scientists and esoteric world.

Nobel Prize-winning Australian psychologist John Carew Eccles (1903-1997) in his most recent work has repeatedly stressed that the psyche (soul) exist independently of the brain of the physical body.

Soul - an immaterial part of man - so say the representatives of many religions, or rather to say - is the result of synthesis of various units of energy and information.

"The soul (Medes) - one of the two main components of the human, energy-informational manifestation of life, where the second is the main constituent part - it is the physical body." Janis Kalns "Soul. First book" Publishing - Latvian Centre of mediums "Laya", Riga, 2006)

The soul of man - is a five-dimensional ball-star tetrahedron, containing countless four-dimensional cones with information of sub-personality in its mind, which correspond to its previous incarnations (the evolutionary links), when it was the plants, animals and humans. Since the structure of the Soul includes four-dimensional cones of Selves of all members of the family of this man, and a great number of its sub-personalities of twins and triplets. (E.Vselensky, L.Vselenskaya, International Center of the Cosmic Mind- Merkaba-Universe, Part 2. Cosmic Bioenergetics - higher academic education in energy information exchange Toolkit, Moscow ICCR, 2005.").

Perhaps, in my opinion, the most important definition was given by mediumistic contact with the essence of Jesus: "Every lifestream is an individualization of God. Your true God-given individuality permanently fixed in the spiritual self, often referred to as the I AM Presence. When your lifestream decided to go down into the material universe for knowledge of life at this level of God's creation, he created an extension of itself, which has become a Soul. Spiritual Self created a spiritual soul of his energies, but in the process, the energy of the soul were lowered in vibrations. Soul energy vibrating at a slightly higher level than the energy of the material universe. Therefore, we can say that the soul can enter into the world, but it is not of this world, and this means that it was not created from the energy of the world. The physical body is composed of the energies of the

material universe, but the soul is just a physical body, as well as the driver gets in the car, without becoming part of it.

While the spiritual self is constant and is influenced by the energy of the material world, the soul is not constant. Soul - a place of your free will, and therefore, you make choices at the level of the soul. When the soul descends into the material world, it is possible to fall into a lower state of consciousness. When this happens, the soul can forget their spiritual origin and even their spiritual identity and personality.

We can say that the soul is in the physical body, but you must be careful not to impose a linear interpretation of this statement. Life is more than any state of consciousness, the energy field. So you cannot just enter the soul in a specific location in space and time. In other words, the soul is not limited in time and space as the physical body. So it would be correct to say that there is an energy field that surrounds the physical body and that the soul is a part of this field. "

Now consider the process of creation of the soul.

The soul is created "by collecting the energy required quality. Take one energy that meets the appropriate parameters, and a very small amount, and is joined by another small amount of energy the next, and then wait for when they join hands under certain conditions. Waiting for the one to the other will grow. Then take the following amount of energy and is coupled to the first two, dock, support mode and then waiting for it will grow. It is very tedious work that requires precision jewelry. And by the time the process is stretched for a long time because you have to increment a lot of energy, a lot of pieces, or more precisely - composites. This is a very delicate components that require careful attention to itself and a long dock. Due to the fact that in this way the soul to grow for a long time, tried a different way of creation - not by laboratory methods, and passed through the natural layers of the Earth. Therefore there were souls animal soul, reaching through the form of animals. This method accelerates the growth of the soul, but on the other hand, such souls subsequently develop longer. And the soul progresses, gaining separate qualities, creating a unique composition. One soul is created nine years of space. One cosmic year is approximately equal to one billion Earth years.

If we talk about the initial moment, then in design and quality are all souls are the same. But they laid a piece that gives them focus on individuality. And the soul progresses, gaining separate quality, creating its own unique flavor.

There are no same souls but only similar. And they are used in similar processes for the production of a single type of energy. When souls are preparing for the realization of one nation, then pick them up on the likes of energy parameters, and instill in the body that have the same "thin" design, which is precisely the time between a nation provides the same type of energy. Therefore, at the moment of the soul belonging to the same nation, the same, but only identical to the initial moment of creation of the nation. And then, in accordance with the program of life, there is time between the qualities of character and individuality of each soul. Every nation has its own direction of development, one more than one, the other - the other. One nation has more of certain qualities, the

other - the other, so at this level of quality and constructively souls belonging to different nations, different from each other.

The following information was revealed through the message of mediums and strengthened personal experience of being in an altered state of consciousness in the higher layers of the vibration.

There are certain laws that are building a new soul. From the initial moment of creation soul lives, because if it is not alive, it cannot be grown within nine cosmic years. That is, the soul is created immediately and spiritualized. This is the great mystery that only the Soul Creator knows.

Creator creates souls, but he has assistants - Highly Light Essences - Space parents - personality in the Angels, which in different fields (the Shekinah, the Elohim, the Quadrille-5 and others) create Light of every Soul, using sound, paint and special energy. Before the soul is created, the parents agree with the Creator of her destiny. Lay special energy pattern for the task of the Soul. This is the power of the soul and its attributes. Soul Creation is great responsibility. During the creation of the soul is born sound - the original name of the soul. Cosmic Parents have the appropriate names and related to the fields of creation and the creation of Souls.

In our presentation we will not detail the characteristics of the fields and the names of Light Beings involved in the creation of the souls, especially the qualities and attributes of the soul, indulge Cosmic Parents. In the time of creation of the soul it is endowed with 21 aspect of divinity, but not all aspects of the soul going to the embodiment to the Earth, she takes with her, but three remain in the higher worlds.

Form of the matrix of every soul of man depends on his development, so all of it is different. The souls of man, just made, all the same, to be exact - they are all empty. The cells of the matrix are not filled. Initially, the soul, coming from the fields of creation, have just a few volumes with the same amount of vitality. At the time of all Souls are standard. Only development makes them all different. It is the quality of the produced energy soul give a different direction in development. Figure, as the code expresses the required quality and quantity required for a given cell, as well as a numeric code is important for us.

The reason is that in the creation of the soul in its design lays one particular particle, which gives the soul a certain kind, but it is inherent, the direction of development. This is a very tiny particle that is only to ensure that all souls are individual, that is, gives originality soul through her chosen direction of development. Therefore, it is thanks to this particle, all souls are unique and individual. They get the ability to change and improve in the desired direction.

There are, however, several points of contact or communication lines, through which the soul in contact with the body and expresses herself through it. Some of these points of contact - this is what many spiritual teachings are called "chakras".

In the process of evolution of body and soul accumulating shell of consciousness.

The four lower bodies of the soul corresponding to the four forces of the Father, the Son, the Holy Spirit and the Mother. Father corresponds to the body of identity, the Son corresponds to the body of thoughts, Mother conforms to the body of feelings, and the Holy Spirit corresponds to the physical body. If the soul is not balanced all four of his lower body, it is attached to the material world. If the soul is balanced the physical body, and the other three are not, it can remain attached to the world of the senses. If the soul has balanced physical and emotional body, it can remain attached to the world of thought, and if it has balanced the three lower body, it can stay tied to the level of identity. We need to realize that the four different levels of the material universe, separated from each other only by the frequency of vibration.

Four levels of the material universe coexist in the same space. The only difference is the difference in vibration. Because the human mind has the ability to manipulate of the light of God, it can increase or decrease the vibration of light. It is important to remember that people are able to change the vibration of the material world, so that they were in keeping with the vibrations of other worlds.

Explore instruments that determine the human body's biological field, souls have not yet managed to anyone. Only a thin vision plan shows the purity of the third eye and the frequency of these bodies, their location, the level of the flue (no bindings), color and sound, energy fullness or energy drain.

It is time to understand the cellular structure of our Soul. Let us consider the main elements that make up the soul at this level.

The material described below is based on the analysis of the information from the book written by Janis kalns as mentioned above and own experience in dealing with self-soul and the Supersoul. The main component of the physical body - the cell, and the main part of the Soul - megaston. Number of megastons more than more developed soul. This number is unstable and constantly changing. Sizes range from 0,0000000001mm to 5 mm in diameter. Its value depends on the mass of the physical body and of its megastons. In adults it depends on the mass of the body, since it is necessary to megastons filled the whole body. If we talk about the weight of the soul, it is determined by the number of megastons. The soul is more developed spiritually at a time when the number of megastons more, regardless of the quality of information stored in them.

About 500 megastons weigh between 0.5 and 1 grams.

2 million megastons, 14-25 grams, respectively.

Megaston's shell provides the necessary environment for all processes in the megaston. She is a function of the screen where it can visually display the information about events in the past, present and future, and to transform it using the information obtained from parallel worlds.

The next component of Megaston is Nevon. These particles are compressed gas that ignited, and exploding can destroy megaston. This occurs when the nucleus Nevon receives relevant information from otanite. Otanite is a database of information accumulation of all the incarnations of the soul. The base consists of 18 thousand units of information, which can also be divided into even smaller particles: Mastiles, Mytrones, Alfes, almenovs, etc. The purpose and meaning of these particles, we will describe below, and now continue to study the function of compressed gas - and consider Nevon result in fire or explosion. This occurs when programmed in a very dangerous situation Otanite that could destroy both one megaston and cause a chain reaction. If such a danger begins programmed at the level of the physical body, the Nevon responsible for the burning of the physical body. The body is burned, and the clothes – not: "burn in hell fire" - the biblical words.

If megaston spoil the shell, then turn on the shield - mikrolon that protects Otan and its particles.

Now consider the function of fine particles of otanite: mastiles. They are responsible for the proper placement of coils in the soul, and are involved in bringing the coils in order, if any deviation from the norm.

Next is Mytrons - they provide communication sessions between Mental systems, as well as any other galaxy in the physical plane. Mytrons are in megastons of whole soul, and provide connection to the higher worlds for each individual megaston and in cases where there is a division of Soul, and in this case, however, can provide a more specific relationship between megastons. Mytrons and megastons all can come together in a single transfer of information, thus increasing the transmission power.

Next particle - Alfes - 600 units of information in Otan. It forms the visual system of each megaston. The entire set of Alfes called 'Soul vision' - the two physical eyes and one eye of Soul.

Next, almenoves - 960 units of information in the Otan, form the auditory system of each megaston. The entire set of Almenoves forms auditory system of the Soul.

And it must be said about Hustors and skanters.

Hustors perform the function of the battery energy, which is produced skanters for the needs of the physical body and soul in the case where the power supply is the total energy of the field stop. It is used just in cases when there is an attack on the astral plane to the soul. You may ask, where is the energy of skanters? Skanters generate energy, excitement for which is taken from a common energy field of the universe, the energy they generate 1.5 times more than they receive and forward it to the hustors. This explains the phenomenon of "free will of the soul" and granted us the opportunity to surpass the Creator in his creation today. The alignment of the soul, the creator of a well thought out mechanism for its energy future creations, but rather the creation of new and bringing them to himself. It is also the fact that skanters consist of an inner and outer pair of skanters, rotating in opposite directions, they provide a balance of megastons in spirals. Skanters moving speed comparable to the speed of light (300 000 m / sec.). Megastons move with great speed spiral and instantly deliver information to helium.

"Think Tank" system of the Soul is Helium. This system is a major center of information processing that is stored in the matrix of the Soul. Helium is composed of a spiral of megastons and Mathon. Soul is a spiral of swirl megastons provides moving in the universe with great speed and the ability to instantly transmit the information to the physical body, even at a distance of millions of light years.

Mathon - the core of the soul brain system, and it is forming from mastilas that are responsible for the proper placement of coils in the Soul, as well as participate in bringing the spirals in the order in case of deviation from the norm.

The objectives of Mathon is:

- To filter all incoming and outgoing information;
- Support all the processes of life in the soul;
- Organize all of its functions;
- Send and receive information at unlimited distances.

Mathon exactly is meaningful only if the "brain" system of Souls no megaston which is reprogrammed. Otherwise, it can be said that the "brain" system of soul is sick.

Gel spiral of megastons performs protective functions of Mathon. In megastons this helix in concentrated form is the most important information of all megastons in the Soul.

The magnetic field of soul is called "Asimoda", and it formed by a bilateral group of imods and Fromes. The number of spirals in the soul depends on the number of megastons. For example, 5000 megastons form 2.5 thousand spirals; 10 million megastones - 5 million spirals.

Megastons bundled in spirals. This procedure organizes Helium by certain characteristics:

- Spiral of megastons responsible for maintaining all the vital processes in the physical body;
- Helium in which a high-level information is programmed to perform specific tasks, and the information is or has manifested in the life of a talent or for some reason have not yet used. They operate at the mental level of Body Soul:
- Helium responsible for a person's emotions and they relate to the emotional body of the soul;
- Helium, which has all the information on how to save the soul and the physical body from the different nature of attacks on this level is a link with the spirit;
- Helium, which has and continues to accumulate all the information about the current life, work, expressed the thoughts and words. All information without exception - the connection of the soul with the body identification.

In case of a break spirals there are problems in the transmission of information, these problems manifest as various diseases.

Summing up the above, we can conclude that our soul is a complex configuration failed particles, cells, body, levels, units. And all of these elements and their functions are ideally in synergy, harmony and synchronicity. After reviewing its structure, you can now understand all the cause-and-effect relationships that are manifested in your life, you know, how they can be corrected with whom to start the level. The life of the soul begins with a cell and extends the idea.
